

Anadarko Project, Woodlands TX

*"I first saw this product in North Carolina, where it was being installed on a concrete floor that had been poured just 72 hours earlier. I was really impressed. After much scrutiny, there was absolutely nothing detrimental I could find. Everything the manufacturers of Go-Early said this system would do, (and they said it would do quite a bit) it certainly did!"*

—Bill Lepito, Principal - Floor Covering Consultants, Amesbury, MA

# Green Concrete Slab Protection & Preparation

**Decks • Roofs • Flooring**

AC•TECH 2170™FC is a type 1 / Class C Liquid Membrane Forming Curing Compound (ASTM C309/C1315-11) that also meets ASTM F3010-13 Two-Component Resin Based Membrane Forming Moisture Mitigation System. AC•TECH offers 15 year performance warranty (labor & materials) against failures resulting from moisture or alkalinity.

ASTM C 1315 Curing Compound

Durable Bond to Green Concrete

ASTM F3010-13 • @ 12 mils

Independent ASTM E96 Testing

Provides Neutral (pH 7) Substrate

Tolerates Alkalinity (pH14) Sustained

4-HOUR • FAST CURE

No Flammable Accelerants to Mix

True One-Coat Application

Spreads Quickly & Uniformly

No Pre-Wetting Slab  
No Sand Broadcast or Removal  
No Moisture or pH Testing

ISO 9001 • Since 2003

1st One-Coat Solution • USA 2000

16 Year Performance History

15 Year Performance Warranty

**16 Year Performance History - 15 Year Performance Guarantee**

*"Go-Early can be installed over freshly poured concrete in as little as three days. This allows an entire building deck to be abraded, coated and cured, edge-to-edge within one week of the pour, making it possible for immediate build-out of interior walls and utility installations. The floors are ultimately flatter, walls are truer, and the moisture mitigation system is installed in half the time. ... This is saving weeks to months of construction time!"*

*—Mark Tisinger, Owner, Choice Polymers, Iowa*

*"With Go-Early, we can get right on the concrete floor before the walls go up. That makes it much easier for us ... and much more cost-efficient for our customers ... to get in and out early!"*

*—Mike Portwood, Division Project Manager - Baker Paints, Tucker, GA*

## Green Concrete Slab Protection & Preparation

Decks • Roofs • Flooring

**How Can We Help You Be Faster ... Leaner ... More Profitable?**

There are many ways you can use our **AC•TECH GoEarly Technology™** to increase performance and reduce risk.

### You can;

- ▲ Dry-in the roof deck early... before proceeding with final roof assembly.
- ▲ Start deck coating projects earlier while also warranting coating adhesion and performance.
- ▲ Shave weeks off tight building schedules by getting on the slab early.
- ▲ Seal and protect green slabs from bond breakers used in tilt-up construction.
- ▲ Gain time by preparing the slab for flooring while the deck is open and before the walls go up.
